1. Implement console program which will meet the following requirements:
   a. Program starts and asks user to enter 7 words separated by space
   b. Program stores all these strings in array.
   c. Program sorts the array putting on the first place strings which has more characters and putting at the end strings with less length
   d. Program prints to console sorted array

   EXAMPLE:
   User input: "apple windows oracle microsoft Apple zpple"

   Program console output:
   microsoft windows oracle apple Apple zpple

   N.B.: Pay extra attention to comparison of strings which has the same lengths but starts with upper and lower case like 'Apple' and 'apple'

Nice to know:
