1. Implement Annotation that allow you to track progress.
    a. Annotation name is 'Todo'
    b. Annotation has next elements:
        i. author - String type
        ii. priority - Priority Enum type (LOW, MEDIUM, HIGH)
        iii. status - Status Enum Type (STARTED, NOT_STARTED)
        iv. * Declare Priority and Status enum INSIDE Todo annotation
    c. Default Priority is LOW
    d. Default status is NOT_STARTED
    e. For author element there is no default value
    f. Annotation can be applied to methods only
    g. Annotation should be available during the runtime
    h. Create TodoAnalyzer class
    i. Declare getTodoReport() method in TodoAnalyzer class
        i. Method returns String that contains Todo report following specific format described below
        ii. The method should take Class object to analyze as method argument
        iii. Method returns String of each method analysis divided by new line separator. Each line should have the next format:
        method name: <HERE METHOD NAME>, author: <HERE AUTHOR>, priority: <HERE PRIORITY>, status: <HERE STATUS>
